#### Abstract

This report contains the theta/rho measurements from 60 neglected double stars systems. For this I used a $28-\mathrm{cm}$ Schmidt-Cassegrain telescope and a Mintron video camera. To use this camera for astronomical intentions first it was necessary to adapt the software to the special size of his detector.

At the beginning of 2007 I decided to do a specific program of doubles that needed updates. To do this, I downloaded the latest version of the Washington Double Star catalog (WDS) and filtered it to show systems with an angular separation greater than 1 " and less than 15 ", that had not been measured since 1991; that is, they had been studied neither by the Hipparcos mission nor by Tycho. A little over fourteen thousand entries were selected; that would be my new observational program.

I used an $\mathrm{f} / 10$ Schmidt-Cassegrain telescope with a 28 cm aperture and a Mintron video camera. The video camera uses a Sony ICX249AL monochrome (black-and-white) sensor, and is very sensitive. The maximum exposure time was 2.56 seconds, though depending on the magnitude of each system, shorter exposure times were sometimes used. A video capture (frame grabber) card was used with the camera to produce $768 \times 576$ pixel still images. Unfortunately, this combination of the $795 \times 596$ pixel sensor and the $768 \times 576$ pixel frame - grabber produces a rescaled image This rescaling must be corrected for using post processing in order for measurements to be correct.

The capture of images was first produced at the primary focus, which yielded a resolution of 0.65 as/ pixel. Also, in most of the cases, images were taken with a 2X Barlow. This configuration resulted in a focal length of 5870 mm at a resolution of .30 arcseconds/pixel.

For the reduction of information I primarily used

Astrometrica version 4.4. With this program, using the UCAC2 catalog when possible, I calculated the absolute astrometry of each star. Later, the program Dobles, developed by Julio Castellano, calculated theta and rho depending on the absolute astrometry. In addition, Astrometrica also calculated the resolution per pixel and the orientation of the image, both necessary in order to perform measurements with the Reduc software. Due to the fact that there were not always sufficient stars to refer to, not all the systems were measured using this method. In these cases, Reduc turned out to be a fundamental tool. However, when possible, every system was measured using both types of software. I want to express my gratitude for the work Florent Losse carried out to make Reduc work despite the re-scaling previously mentioned.

## Description of the Table

When the magnitude appears with two decimals, it is extracted from catalogs, principally from the Tycho-2 Catalog, although I have also used Nomad Catalog, and on occasions I have transformed the aerial map-making of the photometry of the USNOB1.0 to magnitude V. The others, included only for orientation, are calculated by Astrometrica according to the images measured on the basis of the USNOA2.0 catalog in $R$ band without any filter.

The number of the Tycho catalog or GSC is given, as well as the coordinates in J2000.0 epoch, calculated with Astrometrica for the main star.

The spectral classes were calculated primarily on

## Measurement of Neglected Double Stars with a Mintron Video Camera

the basis of JHK photometry of the 2MASS catalog, according to a routine developed by Francisco M. Rica. In many cases, the spectrum is given depending on whether the stars are presumed to be giants or on the main sequence.

All the systems were observed on one single night.

## Acknowledgments

I thank Florent Losse for his work on the Reduc software. Thanks also to Francisco M. Rica Romero for
his help. I also want to thank Juan Luis González Carballo for his help in the translation of this article and his constant encouragement.

Table Notes

1. Spect. G7 V/G1 III and A7 V. Different proper motion of each component. Optical double star.
2. A-component Spect. F7 V.
3. A-component Spect. F1 V.
4. Only measured with Reduc. Primary, with F7 V Spect., has proper motion in RA: $40.3 \mathrm{mas} / \mathrm{yr}$ and in Dec: -43.3 mas/yr. Practically without movement in all the $20^{\text {th }}$ century, so they must have some physical relation.
5. Spect. G5 V and G1 V/F9 III. Small proper motions.
6. Spect. A6 V and G6 V. I see slightly bright the B component.
7. Spect. A9 V and F4 V. Sep. increasing.
8. Spect. F9 V and G3 V.
9. Only measured with Reduc. A-component Spect. K3 V/ K0 III and it has a proper motion in RA: -10.9 mas/yr and in DEC: -21.7 mas/yr.
10. A-component have Spect. M4 III and it has a proper motion in RA: 21.8 mas/yr and in Dec: $2.7 \mathrm{mas} /$ yr. B component is F9 V. Sep. increasing.
11. Very similar Spect., both G7 V/GI III. Sep. decreasing.
12. A-component's Spect. G1 V/ F9 III and it has a proper motion in RA: -20.6 mas/yr and in Dec: -13.4 mas/yr. B component's Spect. G9 V/ G3 III.
13. Only measured with Reduc. A-component's Spect. K1 V/G5 III and it has a proper motion in RA: 0.0 mas/yr and in Dec: -9.5 mas/yr.
14. Spect.: A-component K3 V / G9 III and B component G5 V/ F9 III.
15. Spect. F3 V and F1 V. In this case Theta should have an inverse character, B component must be brighter.
16. Red stars, Spect. M4 III and K2 V/G9 III respectively.
17. Optical system. Spect. G6 V and F8 V respectively.
18. A-component has the next proper motion: -8.8 mas/yr and in Dec: -5.4 mas/yr.
19. Evident optical system. In UCAC2 catalogue proper motion of A-component in RA is $-11.4 \mathrm{mas} / \mathrm{yr}$ and in Dec - $7.8 \mathrm{mas} / \mathrm{yr}$. B component has proper motion in RA $-3.1 \mathrm{mas} / \mathrm{yr}$ and in Dec $-3.8 \mathrm{mas} / \mathrm{yr}$. Spect. F9 V/ F8 III and G7 V/G0 III respectively.
20. Optical couple, they split each other. A-component has a proper motion in RA $21.2 \mathrm{mas} / \mathrm{yr}$ and in Dec -7.9 mas/yr. Spect. K4 V/ K1 III and G1 V/F8 III respectively.
21. Optical double star. A-component has a proper motion in RA $26.6 \mathrm{mas} / \mathrm{yr}$ and in Dec $-34.9 \mathrm{mas} / \mathrm{yr}$. Spect. G5 V/ F9 III and K1 V/ G4 III respectively.
22. Spect. F6 V and G6 V.

## Measurement of Neglected Double Stars with a Mintron Video Camera

23. Optical pair, the split each other quickly. A-component has a proper motion in RA 14.4 mas $/ \mathrm{yr}$ and in Dec -0.3 mas/y and Spect. F3 V. Deducing: B component, a red star (Spect. M3 V/ K4 III), presents a bigger proper motion.
24. Spect. G5 V/ F9 III and G0 V /F8 III.
25. Spect. K3 V/ K0 III and F6 V.
26. Spect. F9 V and F8 V.
27. Similar Spect.: G7 V / G1 III.
28. Proper motions according to the UCAC2 catalogue: A-component in RA: -33.6 mas/yr and in Dec: $18.4 \mathrm{mas} / \mathrm{yr}$, and B: in RA: -35.1 mas/yr and in Dec: -19.9 mas/yr. Common proper motion stars. Spect. F7 V and G6 V.
29. Proper motion of A-component according UCAC2: RA: $11.7 \mathrm{mas} / \mathrm{yr}$ and Dec: -63.1 mas/yr. Spect.: G9 V/ G2 III and K1 V/ G5 III.
30. Spect.: G8 V/ G2 III and K1 V/ G5 III.
31. Proper motion of A-component according to UCAC2: RA 32.7 mas/yr and Dec: $24.5 \mathrm{mas} / \mathrm{yr}$. Spect.: G5 V/ F9 III and K0 V/ G3 III.
32. Optical pair, probably. Spect.: G7 V/ G1 III and K6 V/ K2 III.
33. Spect.: F8 V and G3 V. Insignificant proper motions.
34. Spect.: F6 V and F4 V. Different proper motions. Optical pair.
35. Spect.: F6 V and M0 V/ K4 III.
36. According to Tycho-2, proper motion of A-component: RA: -20.1 mas/yr and Dec: -67.8 mas/yr. Spect.: K0 V. Physical system.
37. The A-component has the next proper motion: RA: $6.8 \mathrm{mas} / \mathrm{yr}$ and en Dec: - $10.6 \mathrm{mas} / \mathrm{yr}$. Spect.: G3 V/ F9 III.
38. AP should be invert. According Nomad Catalog the proper motion of B component is: RA: -45.8 mas/ yr and Dec: 85.1 mas/yr.; Spect.: G9 V/ G2 III. A-component Spect.: G0 V/ F8 III.
39. Proper motions very different, optical double star. Spect.: F6 V and F9 V.
40. According to UCAC2 catalogue, proper motion of A-component is $32.4 \mathrm{mas} / \mathrm{yr}$ and Dec: $-2.7 \mathrm{mas} / \mathrm{yr}$, Spect. F9 V.
41. Main component Spect.: K9 V with the next proper motion: RA $1.2 \mathrm{mas} / \mathrm{yr}$ and Dec: -11.3 (Tycho 2). B component Spect.: G5 V/ G0 III.
42. A-component Spect.: G4 V/ F9 III and has the next proper motion: RA: -4.5 mas/yr and Dec: -6.1 mas/ yr. B component Spect.: K1 V/G5 III.
43. A-component has proper motion: RA: -0.2 mas/yr and Dec: -9.2 mas/yr.
44. Spect.: K1 III and F3 V respectively. A-component proper motion: RA $51.1 \mathrm{mas} / \mathrm{yr}$ and Dec: -32.8 mas/yr. The B component should have the same p.m. Probably physical system.
45. Spect.: F1 V and K0 V. Optical couple.
46. Proper motion of A-component: RA: -36.0 mas/yr and Dec: - 157.3 mas/yr. Proper motion of B component: RA: $5.1 \mathrm{mas} / \mathrm{yr}$ and en Dec: $87.4 \mathrm{mas} / \mathrm{yr}$. Optical double star with high displacement. Spect.: K0 V and G3 V respectively.
47. AP should be invert. Spect.: K and K5 III. Proper motion of B component: RA: 3.6 mas/yr and Dec: 12 mas/yr.
48. Proper motion: RA: 20.8 mas/yr and Dec: 1.2 mas/yr.
49. Spect.: F3 V and G5 V. Proper motion of A-component: RA: $9.7 \mathrm{mas} / \mathrm{yr}$ and Dec: -10.3 mas $/ \mathrm{yr}$.
50. Spect.: F7 V and G2 V. A-component has the next p.m.: RA: -10.2 mas/yr and Dec: -1.2 mas $/ \mathrm{yr}$.
51. Different proper motions, optical double star. A-component = RA: $4.5 \mathrm{mas} / \mathrm{yr}$ and Dec: $-1.7 \mathrm{mas} / \mathrm{yr}$. Bcomponent: RA: 9.6 mas/yr and en Dec: -5.7 mas/yr. AP should be invert.
52. A-component Spect. K has proper motion: RA: 20.4 mas/yr and Dec: $29.1 \mathrm{mas} / \mathrm{yr}$.

## Measurement of Neglected Double Stars with a Mintron Video Camera

53. Optical pair. A-component Spect. G and has p.m.: RA: -8.2 mas/yr and Dec: -31.1 mas/yr. B component has Spect.: K.
54. Not cataloged in WDS. Spect. G6 V (both). Possibility that it's a physical system.

The author is an active observer of double stars, comets and asteroids who is working from home in Spain. He is also a member of the LIADA's Double Star Section.
